

Department of Medical Ethics and History of Medicine

Phase V Learning Objectives

- i) The aim of this internship is provide interns and prospective residents with sufficient information on ethical standards in planning, conducting and publishing their research projects.
- ii) To ensure students acquire ethical decision-making skills on frequently encountered clinical ethical problems.

At the end of the internship students will be able to;

- Describe the informed consent process in researches and obtain informed consent from research subjects
- Define the rights of research subjects
- Reach the national and international ethical and legal regulations about researches on human and animals
- Explain 3R/4R rules in animal researches
- Determine the ethical infringement in publishing
- Write an ethically appropriate research Project report for ethics committee approval
- Apply ethics decision making model for classical cases and describe clinical-ethics consultation and hospital ethics committee as counseling authority in difficult situations.
